**OPERATION AND MAINTENANCE ITEMS**

Operation and maintenance (O&M) is necessary for all conservation practices and is required for all practices installed with NRCS assistance. The landuser is responsible for proper O&M throughout the life of the practice and as may be required by Federal, state or local laws or regulations.

Operation refers to operation of the practice in compliance with all laws, regulations, ordinances, and easements; and in such a manner that will result in the least adverse impact on the environment and will permit the practice to serve the purpose for which it was installed. Maintenance includes work to prevent deterioration of the practice, repairing damage, or replacing components which fail.

Necessary operation and maintenance items for this practice include:

- ☐ Check all rock riprap sections and other structural sections for accelerated weathering and displacement. Replace to original grades if necessary.
- ☐ Maintain vigorous growth of desirable vegetation. This includes reseeding, fertilization, weeding by hand, and application of herbicides when necessary. Periodic mowing may also be needed to control height.
- ☐ All erosion or settlement or cracks in the soil should be investigated (to determine the cause) and repaired. Regrade road surface as needed.
- ☐ Maintain installed fences to control access.
- ☐ Remove debris that may become unsightly or cause damage.
- ☐ Remove rodents or burrowing animals that are causing damage. Repair any damage caused by their activity.
- ☐ Repair any vandalism, vehicular, or livestock damage.
